Date of birth: July 14,2001

❖ About

- Experienced Software Engineer Proficient in JavaScript and Cutting Edge Web Technologies .I specialize in developing JavaScript web applications using emerging technologies, with expertise in Node.js, Express, and MongoDB. I'm passionate about creating high-quality, visually appealing, and optimized web apps. As a competitive programmer and avid reader, I'm committed to ongoing learning and self-improvement. Hard work is a cornerstone of my approach to every project.

❖ Educational qualifications

- **Degree:** Graduated from Business Information System at Sadat Academy.
- **Graduation Year:** 2024
- **Major:** Information System.
- **Grade:** Good

❖ Experience:

1) **Backend NodeJS developer as a freelancer** (May 2025 – Present)

- Collaborated with clients to understand their needs, translating them into tailored technical solutions.
- Designed, built, and maintained the application's server and databases, ensuring high performance, data integrity, and efficient access.
- Developed and maintained backend APIs using Node.js and Express.js, contributing to seamless data flow and system efficiency.
- Implemented user authentication and authorization functionalities using secure methods to protect user data and ensure system integrity.
- Integrated MongoDB and Mongoose for efficient, scalable data storage and retrieval.
- Designed and implemented APIs for seamless integration with Stripe and PayTaps, enabling secure and efficient online payments.
- Implemented robust file upload solutions utilizing server-side storage, Cloudinary, and AWS integration to handle large volumes of data.
- Contributed to the design and implementation of REST APIs and atomic services, enhancing customer satisfaction through reliable and efficient services.
- Collaborated with frontend, mobile, and web scraper teams to ensure smooth data flow, API integration, and compatibility, fostering a cohesive development process and optimal user experience across platforms.
- Wrote clean, secure, easily maintainable, and modular code, adhering to best practices and improving code quality.
- Built reusable code and libraries for future use, enhancing development efficiency and consistency.

- Performed backend tests to optimize performance, ensuring fast and efficient application operation.
- Designed and developed scalable and flexible RESTful APIs for various applications.

❖ **Technical Projects**

Full E-Commerce

([GitHub](#))

- E-commerce API project developed using Node.js and MongoDB.
- Comprehensive features covering category, sub-category, brand, product, user, cart, order, review, coupon management, error handling, and pagination.
- Establishes a robust and scalable foundation for advanced e-commerce.
- Enabled users to add their desired products to both a Wishlist and a shopping cart, streamlining the purchasing process and improving user engagement.
- Integrated secure and efficient payment gateway solutions (Stripe), allowing users to make payments with ease.
- Developed the project with a clean code architecture to ensure maintainability and scalability.
- Graceful error handling with appropriate messages for validation, authentication, database errors, and exceptional scenarios.
- Express-validator validation ensures user input adheres to predefined rules, enhancing data integrity and system reliability.
- Implementing all special cases unique to the e-commerce app.

SarahaApp

([GitHub](#))

- Social messaging backend developed using Node.js, Express.js, and MongoDB, enabling users to send and receive anonymous or non-anonymous messages.
- Implemented Authentication and Authorization using JWT, bcryptjs, and Role-based access (User & Admin) for secure and scalable user management.
- Developed a real-time communication system with Socket.io, allowing instant message delivery and notifications.
- Integrated Cloudinary for seamless image and file uploads, with validation via Multer and automated cleanup of temporary files.
- Added advanced account management features including Freeze Account and Hard Delete, accessible by both users and admins.
- Built with a clean, modular, and maintainable ES6 architecture, ensuring code scalability and performance optimization.
- Implemented centralized error handling and input validation to maintain reliability and improve developer experience.
- Hosted the backend on AWS for improved deployment flexibility and cloud-based performance..

❖ **Skills**

ExpressJS

NodeJS

NoSQL (MongoDB)

SQL (MySQL)

RESTful APIs

Socket.io

SOLID Principles

Problem Solving

Data Structure

Algorithms

Database Design

Clean Code

Git /GitHub

Basics Docker

Object Oriented Programming

❖ **Language Skills**

- **Arabic:** Mother tongue
- **English:** (Fluent writing & reading and very good in listening & speaking)
